DETAILED ACTION

Applicant's election without traverse of Group 1, claims 1-8 in the reply filed on January 22, 2007 is acknowledged. However, since claims 1-8 are allowable over the art of record, pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement as set forth in the Office action mailed on September 20, 2006, is withdrawn** and claims 9-11 hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors, e.g., typographical, grammar, idiomatic, syntax and etc. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claims 1-11 are objected to because of the following reasons:

Art Unit: 1764

- a). Typographical errors in claim 1, such as : “pours” in line 8; “said compensate” in line 10; and “electralizer” in line 15. See also claim 2, line 2, and claim 10. See further “t” in claim 10, section B).
- b). See the spacing in some words e.g., “ w ater” in claim I, line 12.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- a). The recitation in claim 1, last two lines of

“heat transfer system to transfer heat energy produced in said reactor to said reactor to provide heat to supplement said solar heat”

provides for ambiguity especially with the recitation of “produced in said reactor to said reactor”.

- b). Claim 9 is incomplete as the steps were not recited. Claim 9 is indefinite because it is unclear what method/process applicant is intending to encompass as it does not set forth any active, positive steps involved in the method/process.

- c). It is unclear whether claim 10 is directed to a process or to an apparatus claim? The preamble recites “A plant for producing low-deuterium water from seawater”(apparatus), whereas, the body of the claim recites process/method steps.

- d). Claim 11 is inconsistent with claim 10, the claim from which it depends. Claim 10 recites “ A plant” , whereas claim 11 recites “ The process” which is inconsistent therewith. [A dependent claim incorporates every features of the claim from which it depends and cannot change nor orient the limitation already recited in the independent claim].

Claim 9 is rejected under 35 U.S.C. 101 because the claimed recitation of a process/method, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claims 1-13 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a). Spevak discloses a process for separating high purity water.
- b). Mortenson discloses a distillation column having a membrane and heated by solar energy.
- c). Cullingford discloses the combination of filtration, electrolyzer and a fuel cell reactor.
